## Z812V - November 2, 2023

Item \# Z812V was discontinued on November 2, 2023. For informational purposes, this is a copy of the website content at that time and is valid only for the stated product.

## 1/2" (12 mm OR 13 mm ) TRAVEL MOTORIZED ACTUATORS

13 mm Travel Compact Stepper Motor Actuators
OVERVIEW

Our ZFS13 and ZFS13B Actuators provide smooth, precise linear motion control in a sleek, compact package measuring just 89.5 mm ( 3.52 ") or 85.5 mm $(3.36 ")$, respectively, in length when fully retracted. This compact profile reduces the distance between the end of the actuator and optomechanical components, keeping the center of mass closer to the contact point than the ZST actuators featured above.

Powered by a small-diameter, two-phase, bi-polar stepper motor, these actuators operate at speeds of up to $2.0 \mathrm{~mm} / \mathrm{s}$. The non-rotating drive tip reduces wear and friction and improves smoothness of motion by removing rotational contact at the tip. If power is not supplied to the actuator, manual adjustment is achievable using the rear-located thumbscrew. The actuator motor can be damaged if this thumbscrew is rotated while power is being supplied.

The ZFS13 actuator has a $1 / 4$ " -80 threaded barrel that can be mounted to any manual mirror mount for stage with $1 / 4$ "-80 threads, while the ZFS13B actuator has a $\varnothing 3 / 8$ " barrel for compatibility with a wide range of translation and rotation stages. Simply remove the existing manual adjuster from the mount, and screw in our ZFS Actuator.

These actuators incorporate stepper motors that provides sufficient torque for loads up to 40 N . The actuators allow very small step sizes over the entire travel range, delivering greater flexibility with low ( $<15 \mu \mathrm{~m}$ ) backlash and fine

| Velocity | $2.0 \mathrm{~mm} / \mathrm{s}(\mathrm{Max})$ |  |
|  |  |  |

resolution. The design incorporates a 400:9 gear reduction head which, when combined with the 49,152 microsteps per revolution offered by the KST201 stepper motor driver, gives a theoretical travel per microstep of 0.46 nm (see the Calculations tab for details).

Hall effect limit switches prevent the unit from being overdriven and provide homing capability with an accuracy of $<5.0 \mu \mathrm{~m}$. The ZFS series actuators come with 0.6 m of cable terminated in a 15-pin D-Type connector (see the Pin Diagrams tab) that is compatible with our KST201 stepper motor controller. A 1 m (3.3 ft) extension cable (PAA614) is available separately.

The ZFS13B has a high tolerance standard $\varnothing 3 / 8^{\prime \prime}$ mounting barrel that is compatible with many translation and rotation stages including our popular MT1 Translation Stages. The ZFS13 has been designed specifically to replace the manual adjusters in stages and mirror mounts that have 1/4"-80 threaded fittings. Simply remove the existing manual adjuster from the mount, and screw in our ZFS Actuator. The manual adjuster of the MT1 stage in the photo below is replaced with a ZFS13B motorized actuator.

## How to calculate the linear displacement per microstep

The ZFS series of motors has 24 full steps per revolution, and when driven by the KST201 drivers, there are 2048 microsteps per full step, giving 49,152 microsteps per revolution of the motor. The output shaft of the motor goes into a 400:9 gear head. This requires the motor to rotate 44.445 times to rotate the 1.0 mm pitch lead screw one revolution. The end result is the lead screw advances by 1.0 mm .

Linear displacement of the lead screw per microstep:

$$
\text { Number of Microsteps x Gearbox Ratio }=49,152 \times 44.445=2184560.64
$$

The linear displacement of the lead screw per microstep is
$1.0 \mathrm{~mm} / 2184560.64=0.46 \times 10^{-6} \mathrm{~mm}=0.46 \mathrm{~nm}$

## 13 mm Travel Stepper Motor Actuators

## Features

Non-Rotating Drive Tip
Bi-Polar Stepper Motor Actuator: 123.0 mm (4.84") Long
Two Mounting Options: $\varnothing 3 / 8^{\prime \prime}(9.525 \mathrm{~mm})$ Smooth Barrel or
$1 / 4$ "-80 Threaded Barrel
Compatible with Mirror Mounts and Translation Stages using
$1 / 4 "-80$ Thread or 3/8" Mounting Block
Also Available in 6 mm and 25 mm Travel Versions

Our ZST Actuators provide smooth, precise linear motion control in a package measuring $123.0 \mathrm{~mm}\left(4.844^{\prime \prime}\right)$ in length. Powered by a small-diameter, two-phase, bi-polar stepper motor, these actuators operate at speeds of up to $2.0 \mathrm{~mm} / \mathrm{s}$. The non-rotating drive tip reduces wear and friction and improves smoothness of motion by removing rotational contact at the tip.

## Required Controller KST201

- 49,152 Microsteps per Revolution
- 15 V Output at 12 W

- Trapezoidal and 'S-Curve' Velocity Profiles

These actuators incorporate a stepper motor that provides sufficient torque for loads up to 40 N . They allow very small step sizes over the entire travel range, delivering greater flexibility with low ( $<15 \mu \mathrm{~m}$ ) backlash and fine resolution. The design incorporates a $41: 1$ gear reduction head which, when combined with the 3072 microsteps per revolution offered by the KST201 stepper motor driver, gives a theoretical travel per microstep of 0.5 nm (see the Calculations tab for details).

The ZST213 actuator has a $1 / 4$ "-80 threaded barrel that can be mounted to any manual mirror mount for stage with $1 / 4$ "- 80 threads, while the ZT213B actuator has a $\varnothing 3 / 8^{\prime \prime}(9.525 \mathrm{~mm})$ barrel for compatibility with a wide range of translation and rotation stages, including our popular MT1 Translation Stages. Simply remove the existing manual adjuster from the mount, and screw in our ZST Actuator.

Hall effect limit switches prevent the unit from being overdriven and provide homing capability with an accuracy of $<5.0 \mu \mathrm{~m}$. The ZST series actuators come with $0.6 \mathrm{~m}(2 \mathrm{ft})$ of cable terminated in a 15 -pin D-Type connector that is compatible with our KST201 stepper motor controller. A $1 \mathrm{~m}(3.3 \mathrm{ft})$ extension cable (PAA614) is available separately.

## How to calculate the linear displacement per microstep

Each member of the ZST200 series of motors has 24 full steps per revolution, and when driven by the KST201 drivers, there are 2048 microsteps per full step. Hence, there are 49,152 microsteps per revolution of the motor. The output shaft of the motor goes into a $40.866: 1$ gear head. This requires the motor to rotate 40.866 times to rotate the 1.0 mm pitch lead screw one revolution. The end result is the lead screw advances by 1.0 mm . To calculate the linear displacement of the actuator per microstep, use the following:

Linear displacement of the lead screw per microstep:

$$
\text { Number of Microsteps } \times \text { Gearbox Ratio }=49,152 \times 40.866=2,008,645.63
$$

The linear displacement of the lead screw per microstep is

$$
1.0 \mathrm{~mm} / 2,008,645.63=0.49 \times 10^{-6} \mathrm{~mm}=0.5 \mathrm{~nm}
$$

## 12 mm Travel DC Servo Motor Actuators

## Features

Required
Controller
KDC101

- 34,555 Microsteps per Revolution
- 15 V Output at 2.5 W
- Trapezoidal Velocity Profile

Thorlabs' Z912 and Z912B motorized actuators are engineered for use with optical positioning devices. They offer high resolution in a lightweight package, which makes them ideally suited for demanding optical laboratory automation applications.

Electromechanical limit switches provide overdrive protection and accurate home positioning. The incorporated motor is capable of speeds up to 2.6 $\mathrm{mm} / \mathrm{s}$, but a maximum speed of $2.3 \mathrm{~mm} / \mathrm{s}$ is recommended in order to maintain the specified control. The precision of the encoder ( 512 counts per motor revolution) results in a minimum resolution of about 29 nm . See Calculations tab for details.

The Z912 has been designed specifically to replace the manual adjusters in stages and mirror mounts that have $1 / 4$ "- 80 screw-in fittings, while the $Z 912 B$ is for use with $3 / 8^{\prime \prime}$ barrel clamps (e.g., the $1 / 2^{\prime \prime}$ manual micrometer in the MT Series Translation Stages). Simply remove the existing manual adjuster from the mount, and screw in our Z9 actuators, as shown in the images below.

In addition to the Z912 and Z912B motorized actuators, we also offer the Z812V and Z812BV vacuum-compatible versions (sold below), which are rated for use down to $10^{-6}$ Torr and are shipped with a 1.6' flat ribbon cable, IDC connector, and converter cable for use with our KDC101 controller. For applications with different travel requirements, please see our 6 mm Z906 and 25 mm Z825 actuators.

The KDC101 DC Servo Controller is the required driver for the $Z 9$ series actuators. The latest version of the Kinesis software can be downloaded here. Firmware version 2.2.8 or higher, included in the Kinesis software version 1.14 .40 or higher download, is required for using the KDC101 with the Z9 actuators. Prior versions of firmware will operate the $\mathrm{Z9}$ actuators but will call the actuators Z 8 .

## How to Calculate the Linear Displacement per Encoder Count

For the Z912 and Z912B, there are 512 encoder counts per revolution of the motor. The output shaft of the motor goes into a $67.49: 1$ planetary gear head. This requires the motor to rotate 67.49 times to rotate the 1.0 mm pitch lead screw one revolution. The end result is the lead screw advances by 1.0 mm.

The linear displacement of the actuator per encoder count is given by

$$
512 \times 67.49=34,555 \text { encoder counts per revolution of the lead screw, }
$$

whereas the linear displacement of the lead screw per encoder count is given by
$1.0 \mathrm{~mm} / 34,555$ counts $=2.9 \times 10^{-5} \mathrm{~mm}(29 \mathrm{~nm})$.

12 mm Travel Vacuum-Compatible DC Motor Actuators

- Limit Switches for Zero Datum and Actuator Protection
- Rated Down To $10^{-6}$ Torr.
- Also Available in 6 mm and 25 mm Travel Versions

The Z812V and Z812BV actuators offer features and specifications similar to the Z912 actuators described above with the added benefit of being vacuum compatible down to $10^{-6}$ Torr. They incorporate vacuum-rated servo motors, a phosphorus bronze internal coupling mechanism and mounting bush, and high vacuum grease.

These actuators are shipped with a $1.6^{\prime}(0.5 \mathrm{~m})$ vacuumcompatible flat ribbon cable with IDC connector. The cable has a 0.05 " ( 1.27 mm ) pitch, 28 AWG stranded conductors, and Fluorinated Ethylene Propylene (FEP) insulation. A converter cable for use with the KDC101 controller is also supplied, but it is not vacuum compatible and should only be used outside the chamber.

For applications with different travel requirements, please see our 6 mm and 25 mm actuators. For vacuum-compatible versions of our stages and mirror mounts, please contact Tech Support.

Please note that previous generation TDC001 units will require a firmware upgrade to V 1.0 .10 or later before they can be used with the Z 8 series motors. An upgrade is
c. The nominal motor drive voltage is 6 V . Voltages up to 12 V can be used with pulse width modulation (PWM) controlled outputs.
included with the latest APT Server software, which can be downloaded here.

## Required Controller KDC101

- 34,555 Microsteps per Revolution
- 15 V Output at 2.5 W
- Trapezoidal Velocity Profile

## How to Calculate the Linear Displacement per Encoder Count

For the Z 812 V and Z812BV, there are 512 encoder counts per revolution of the motor. The output shaft of the motor goes into a $67.49: 1$ planetary gear head. This requires the motor to rotate 67.49 times to rotate the 1.0 mm pitch lead screw one revolution. The end result is the lead screw advances by 1.0 mm .

The linear displacement of the actuator per encoder count is given by
$512 \times 67.49=34,555$ encoder counts per revolution of the lead screw,
whereas the linear displacement of the lead screw per encoder count is given by
$1.0 \mathrm{~mm} / 34,555$ counts $=2.9 \times 10^{-5} \mathrm{~mm}(29 \mathrm{~nm})$.

The vacuum-compatible cable integrated with the $\mathrm{Z812V}$ and Z 812 BV is terminated in a Female IDC 10-Pin socket connector. A short converter cable, which adapts this female IDC socket connector to a D-Type male HD15 pin connector, is included with the Z812V and Z812BV to facilitate connecting the actuator to the recommended KDC101 controller. This converter cable, whose terminating connectors are shown at right, is not vacuum compatible. Information describing the pin assignments for both the female IDC socket and Male D-Type HD connector (when it is connected to the female IDC socket connector) follows.

## 13 mm Travel Piezo Inertia Actuator

Features

Compact Design: $31.5 \mathrm{~mm} \times 17.0 \mathrm{~mm}(\mathrm{~W} \times \mathrm{H})$
20 nm Typical Step Size
Manual Adjustment via Knob on Adjuster Screw
125 V Maximum Operating Voltage
Ø3/8" Mounting Barrel for Compatibility with Translation Stages

- Ideal for Set-and-Hold Applications that Require High-Resolution Relative Positioning
Also Available in $10 \mathrm{~mm}, 25 \mathrm{~mm}$, and 50 mm Travel Versions

Thorlabs' PIA13 Piezoelectric Inertia Actuator provides high-resolution linear motion control with a long piezo-controlled translation range in a compact package. It can support loads up to 2.5 kg and preloads up to 25 N with typical movements of 20 nm and no backlash. The step size can be adjusted up to $30 \%$ to a maximum of approximately 30 nm using the KIM101

Controller and Kinesis ${ }^{\circledR}$ software. However, due to the open-loop design, piezo hysteresis, and application conditions such as the direction of travel, the achieved step size of the system can vary by up to $20 \%$ and is not normally repeatable. An external feedback system will need to be used to overcome this variance.
 The control cable can be adjusted up to $110^{\circ}$ for spaceconstrained applications.

This actuator has a $\varnothing 3 / 8^{\prime \prime}(\varnothing 9.525 \mathrm{~mm})$ barrel that can be mounted in a manual stage that has a $\varnothing 3 / 8$ " mounting clamp. For compatibility with $1 / 4 "-80$ threaded mirror mounts see our 10 mm travel piezo inertia actuator. The actuator is self-locking when at rest and when there is no power supplied to the piezo, making the actuator ideal for set-and-hold applications that require nanometer resolution and long-term alignment stability. Manual adjustments can be made using the knob on the adjuster screw, as long as the piezo is not actively translating the screw; the knob is also compatible with $5 / 64$ " ( 2.0 mm ) hex keys.

Powered by a 10 mm long discrete piezo stack, the actuator can operate at speeds of up to $3.5 \mathrm{~mm} /$ minute. The design of the piezo motor will rotate the tip of the lead screw during translation. For information on the design of our piezo inertia "slip-stick" motor actuators, please see the complete presentation here.

## Required Controller

A KIM001 or KIM101 controller is required to operate our PIA13 Piezo Inertia Actuator; the actuator cannot be operated using a standard piezo controller. These drivers have an internal sawtooth voltage signal generator capable of sending submillisecond pulses (steps) with controllable amplitudes from 85 V to 125 V . The KIM001 and KIM101 controllers offer one and four output channels, respectively.

For more information, please see the full web presentation.

## 13 mm Travel Vacuum-Compatible Piezo Inertia Actuator

Features

Compact Design: $31.5 \mathrm{~mm} \times 17.0 \mathrm{~mm}(\mathrm{~W} \times \mathrm{H})$
20 nm Typical Step Size
Manual Adjustment via Knob on Adjuster Screw

- Rated Down to $10^{-6}$ Torr
- 125 V Maximum Operating Voltage
- $\quad \varnothing 3 / 8$ " Mounting Barrel for Compatibility with Translation Stages
- Ideal for Set-and-Hold Applications that Require High-Resolution Relative Positioning
- Vacuum-Compatible PIAK10VF Actuator for KS1TV Mirror Mount Also Available

Thorlabs' PIA13VF Vacuum-Compatible Piezoelectric Inertia Actuator is rated down to $10^{-6}$ Torr operation and provides highresolution linear motion control with a long piezo-controlled translation range in a compact, vacuum-compatible package. It can support loads up to 2.5 kg and preloads up to 25 N with typical movements of 20 nm and no backlash. The step size can be adjusted up to $30 \%$ to a maximum of approximately 30 nm using the KIM101 Controller and Kinesis ${ }^{\circledR}$ software. However, due to the open-loop design, piezo hysteresis, and application conditions such as the direction of travel, the achieved step size of the system can vary by up to $20 \%$ and is not normally repeatable. An external feedback system will need to be used to overcome this variance.

This actuator has a $\varnothing 3 / 8^{\prime \prime}(\varnothing 9.525 \mathrm{~mm})$ barrel that can be mounted in a manual stage that has a $\varnothing 3 / 8$ " mounting clamp. The actuator is self-locking when at rest and when there is no power supplied to the piezo, making the actuator ideal for set-and-hold applications that require nanometer resolution and longterm alignment stability. Manual adjustments can be made using the knob on the adjuster screw, as long as the piezo is not actively translating the screw; the knob is also compatible with 5/64" (2.0 mm) hex keys.

Each actuator has an integrated 0.75 m flying lead, plus 1.0 m of cored cable for wiring outside the vacuum chamber. The flying leads and cored cable lengths can be cut down as needed, but the total length (inside and outside) should not exceed 2.0 m . As shown in the image below, the flying lead for each actuator can be rotated up to $110^{\circ}$ for space-constrained applications.

Powered by a 10 mm long discrete piezo stack, the actuator can operate at speeds of up to $3.5 \mathrm{~mm} /$ minute. The design of the piezo motor will rotate the tip of the lead screw during translation For information on the design of this piezo inertia "slip-stick" motor actuator, please see the complete presentation here.

## Required Controller

A KIM001 or KIM101 controller is required to operate our PIA13VF Piezo Inertia Actuator; the actuator cannot be operated using a standard piezo controller. These drivers have an internal sawtooth voltage signal generator capable of sending sub-millisecond pulses (steps) with controllable amplitudes from 85 V to 125 V . The KIM001 and KIM101 controllers offer one and four output channels, respectively.

For more information, please see the full web presentation.

Click for Details

## Required Controller KIM001 or KIM101

- KIM001: Single-Channel Output
- KIM101: Four Output Channels, Capable of Multi-Channel Operation
- Standalone Control via Top Panel or PC Control via USB
- Voltage Output from 85 V to 125 V

| Item \# ${ }^{\text {a }}$ | PIA13VF |
| :---: | :---: |
| Travel | 13 mm (0.51") |
| Typical Step Size ${ }^{\text {b,c }}$ | 20 nm |
| Maximum Step Size | 30 nm |
| Step Size Adjustability ${ }^{\text {c }}$ | <30\% |
| Maximum Step Frequency | 2000 Hz |
| Backlash | None |
| Maximum Active Preload ${ }^{\text {d }}$ | 25 N |
| Recommended Maximum Axial Load Capacity ${ }^{\text {e }}$ | 2.5 kg ( 5.51 lbs ) |
| Speed (Continuous Stepping) | $2 \mathrm{~mm} /$ minute (Typical) $<3.5 \mathrm{~mm} /$ minute (Maximum) |
| Drive Screw | 1/4"-80 Thread, Hard PVD Coated |
| Motor Type | Piezoelectric Inertia |
| Mounting Feature ${ }^{f}$ (Auxiliary) | Ø3/8" ( $\varnothing 9.525 \mathrm{~mm}$ ) Barrel (3/8"-40 Thread with Lock Nut) |
| Vacuum Rating | $10^{-6}$ Torr |
| Operating Temperature | 5 to $130{ }^{\circ} \mathrm{C}$ ( 41 to $266{ }^{\circ} \mathrm{F}$ ) |
| Dimensions | $\begin{gathered} 2.34 " \times 1.24 " \times 0.67 " \\ (59.5 \mathrm{~mm} \times 31.5 \mathrm{~mm} \times 17.0 \mathrm{~mm}) \end{gathered}$ |
| Cable Length | $0.75 \mathrm{~m}(2.48 \mathrm{ft})$ Flying Lead for Vacuum, 1.0 m ( 3.3 ft ) Cored Cable for Wiring Outside Chamber |
| Connector | SMC Female |
| Required Controller ${ }^{\text {g }}$ | KIM001 or KIM101 ${ }^{\text {h }}$ |

a. Specifications are measured using the KIM101 Piezo Inertia Controller.
b. This value can vary by up to $20 \%$ and is not normally repeatable due to component variance, change of direction, and application conditions..
c. This can be adjusted by changing the piezo drive voltage - refer to the controller manual for more details
d. The axial force applied to the drive tip to achieve the specified step size. A minimum of 5 N is recommended to enhance stepping behavior
e. A higher maximum load is possible but it may decrease the typical step size
f. To order vacuum-compatible versions of our translation stages, please contact Technical Support.
g. Controllers Sold Separately
h. These actuators can also be controlled using the legacy TIM101 T-Cube ${ }^{\text {TM }}$ controller.

Description
Customer Inspired! Vacuum-Compatible Piezo Inertia Actuator, 13 mm Travel, $\varnothing 3 / 8$ " Mounting Barrel

## Re-Greasing Kit

Features

|  | - 1.5 cc Syringe of Apiezon 100 Grease |
| :---: | :---: |
|  | - Convenient, Inexpensive Package that Reduces Waste |
| $\cdots$ | - Prolongs Lifetime of Actuator |
|  | - Ready to Dispense |
| GKz8 | - Vacuum Compatible to $10^{-9}$ Torr |

This Apiezon grease has excellent anti-seize properties. It contains PTFE for maximum lubricity and is ideal for re-lubricating the lead screw threads of our ZST, ZFS, Z8, and Z9 series actuators. It is supplied in a syringe for easy application and is recommended both for general use and for vacuum applications down to $10^{-9}$ Torr. It has an optimal working range of 10 to $30^{\circ} \mathrm{C}\left(50\right.$ to $\left.86^{\circ} \mathrm{F}\right)$.

Note: It is recommended that the lead screw and end ball of the Z8, Z9, ZFS, and ZST actuators are lubricated every 10,000 cycles or whenever a squeaking noise is heard during motion.

| Part Number |  | Description | Price |

## Stepper and DC Servo Drive Cables

Thorlabs' DRV, ZST, and ZFS Stepper Motor Actuators, as well as our Z8 and Z9 DC Servo Motor Actuators, come with cables for connecting to the required controllers. Thorlabs also offers separate cables that may be used as extension cables.

## Stepper Motor Cables

Thorlabs offers a variety of cables to support several stepper motor actuator and controller combinations. Supported stepper motors include our ZST, ZFS, and DRV actuators; supported controllers include our BSC benchtop controllers, our KST201 K-Cube ${ }^{\text {TM }}$ Controller, and our MST602 Rack Control Module. In order to see which cable is compatible with a given combination of stepper motor and controller, please see the table below. The pin assignment for each cable is given in the Pin Diagrams tab. Please note that these cables cannot be used with motors and controllers that do not match their pin assignment, even if the connectors are the same.

## DC Motor Cables

The PAA632 is a 2.5 m cable for our Z8 and Z9 series of DC motor actuators. This cable is intended to be used with the KDC101 K-Cube DC Servo Motor Controller. The pin assignment for this cable is given in the Pin Diagrams tab. Although it uses a 15-pin connector, this cable is not compatible with any of our stepper motors.

Controller

a. Green shading indicates hardware for $D C$ servo motors.
b. The KST201 K-Cube Controller can be used to drive our DRV Stepper Motor Actuators (excluding the DRV208, which is incompatible) at a reduced velocity.

PAA612 and PAA613 Stepper Motor Cables
DA15 Male D-Type to DE15 Female D-Type

Female

| DA15 Male Pin | DE15 Female Pin | Description |
